

VENKATA SANTOSH KUMAR KORNU

Data Analyst | Business Intelligence & Reporting | SQL, Excel, Power BI
Leicester, UK | +44 7352 685006 | venkatakornu@gmail.com | LinkedIn: linkedin.com/in/kornu-venkata-santosh-kumar-675009232 |
GitHub: github.com/venkatakornu-eng | Portfolio: venkatakornu-eng.github.io

PROFILE

Analytically minded MSc Data Science candidate with a numerate, engineering background (BTech Electronics & Communication Engineering) and hands-on experience analysing large datasets to identify trends, gaps and root causes. Skilled in SQL, Excel and Power BI/Tableau, with experience building dashboards, automating reporting processes and translating complex data into clear, actionable recommendations for non-technical stakeholders. Has investigated relationships between variables across financial, environmental and operational datasets, and brings a structured, continuous-improvement mindset together with strong organisational and stakeholder-management skills to fast-paced, cross-functional environments.

TECHNICAL SKILLS

- Data Analysis: SQL, Excel (Pivot Tables, Pivot Charts, Slicers, Conditional Formatting), Python (Pandas, NumPy), R, data cleaning, data wrangling, gap analysis, root cause analysis, trend analysis
- Business Intelligence & Visualisation: Power BI, Tableau, dashboard design and automation, Matplotlib
- Databases: SQL query writing, database traversal fundamentals
- Statistics: Hypothesis testing, correlation analysis, regression analysis
- Machine Learning / AI: Classification, time-series and predictive modelling, model evaluation
- Tools & Development: Microsoft Excel, PowerPoint, Word, Git, GitHub, Jupyter, VS Code

EDUCATION

MSc Data Science, University of Leicester, UK <i>Relevant modules: Statistics, Modelling Data, Data Science Practice</i>	<i>Sep 2025 – Present</i>
BTech, Electronics & Communication Engineering, IIIT Kalyani, India	<i>2021 – 2025</i>

PROJECT EXPERIENCE

Birmingham City Council Spending Analysis Dashboard <i>Excel Pivot Tables Dashboards github.com/venkatakornu-eng/birmingham-spending-analysis</i>	<i>Nov 2025</i>
--	-----------------

- Cleaned and analysed 213,000+ council financial transactions in Excel, performing gap and trend analysis across departments, suppliers and time periods to identify spending patterns.
- Built an interactive Excel dashboard using Pivot Tables, Pivot Charts, Slicers and Conditional Formatting to monitor spending KPIs by directorate, supplier and quarter.
- Identified that the City Housing Directorate accounted for around 26% of total spend, along with supplier concentration and quarterly variation trends, and translated findings into clear, business-relevant recommendations.

Reporting Automation & Analytics Project with SmartViz <i>MSc Dissertation, University of Leicester, in collaboration with SmartViz SQL, Power BI-style dashboards, Python</i>	<i>Ongoing, Jun 2026 – Present</i>
--	------------------------------------

- Analysing a real-world smart-building dataset of over 1 million time-series records (occupancy, CO2, temperature, humidity) for external industry partner SmartViz, identifying data-quality issues and structuring reporting-ready datasets.
- Designing an automated reporting and query system (built on a multi-agent AI/SQL architecture) that converts business questions into structured queries, visualisations and written insights, reducing the manual effort involved in dashboard and report generation.
- Defining data validation and evaluation criteria (query accuracy, data-mapping accuracy, error rate) to ensure reporting outputs are reliable and auditable before being presented to stakeholders.
- Working directly with an external industry partner and academic supervisors to translate ambiguous business questions (e.g. “which rooms are underused?”) into structured analysis and actionable recommendations.

Statistical Analysis of European Greenhouse Gas Emissions

2025

R | Statistical Analysis | Hypothesis Testing | github.com/venkatakoru-eng/Europe-emission-analysis

- Investigated relationships between time and emission levels across European countries, applying correlation and regression analysis to test for significant trends and identify root causes of variation.
- Conducted hypothesis testing (t-tests) to determine whether differences between countries were statistically significant, supporting evidence-based conclusions and recommendations rather than assumptions.
- Cleaned and consolidated a large multi-sheet dataset into a structured format suitable for reporting and comparative analysis.

Predictive Modelling for Time-Series Data

Jul 2024

Python | MLP, LSTM, GRU

- Compared multiple predictive modelling approaches on time-series traffic data, reducing forecast error (RMSE) by 15% versus baseline through feature engineering and model tuning.

PROFESSIONAL EXPERIENCE

AI & Data Scientist, Springer Capital

Aug 2026 – Present

Internship, United Kingdom, Remote

- Conduct exploratory data analysis and statistical analysis on structured and unstructured datasets to uncover actionable insights and support data-driven decision-making.
- Create data visualisations, dashboards and reports to communicate findings to stakeholders, and work with SQL and databases to prepare data for analysis and reporting.
- Build and evaluate predictive models, monitoring performance using appropriate evaluation metrics, and document methodologies and workflows for cross-functional teams.

Data Analytics Intern – AI & Large Language Models, Vodafone Idea Foundation (_VOIS)

Oct 2025

Remote, India

- Analysed a science and technology dataset as part of a 5-student project team, generating data-driven insights and a written report to support the team's conclusions and recommendations.
- Analysed multiple additional datasets, strengthening skills in data processing, reporting and communicating findings clearly to the wider team.

CERTIFICATIONS / ADDITIONAL INFORMATION

- Deloitte Australia — Data Analytics Job Simulation: Built a Tableau dashboard and used Excel to classify data and draw business conclusions from a case study.
- Tata Group — Data Analytics Job Simulation: Conducted exploratory data analysis to assess data quality and structure insights supporting a predictive modelling framework.
- Completed a team-based consultancy project, developing skills in business problem-solving, stakeholder communication, teamwork and presentation. Participated in workshops focused on the UK graduate job market.

- Eligible to work in the UK.
